

# Beat Thang Virtual

2.0.1

Included in this release:

- Installers for Beat Thang Virtual 2.0.1 for Mac OS X and Windows, including the Audio Unit plug-in on Mac OS X and VST on both Mac and Windows.
- Upgraders for any Beat Thang Virtual version to 2.0.1 on Mac and Windows.

Changes in this release:

- Addition of clickable widgets for clicking and dragging of both values and start and end points.

Fixed bugs:

- 9660 - Bar/Beat counter updates sometimes "skip a beat"
- 10575 - Dragging the start and end sample indicators lags behind the mouse.
- 10589 - Volume meters are glitchy
- 10590 - Volume is loud when first loading a session but then it returns to normal.
- 10602 - Switching from Edit to File functions in Kit mode crashing
- 10603 - Can not load "copies"
- 10608 - Foldover LADSPA plug-in not loading on Mac.
- 10616 - Effect mode can be launched over effect mode, even when its the same bus.
